Mr. F. A. Wardlaw, Secy.,
Edison Pioneers,
29 West 39th Street,
New York City.

My dear Mr. Wardlaw:

A search that I had to make into Edison History led me to look in Schellen's book on Magneto-Electric and Dynamo-Electric Machines; translated from the German by Keith, and published by Van Nostrand, in 1884.

I found, on page 350, an excellent illustration of Edison's "E" dynamo, which, together with certain physical dimensions heretofore given you by Mr. Andrews and myself, may serve for a good restoration model of the machine.

The book also contains five cuts of the "Z", "L" and "K" machines, as I have determined by comparison with my blueprints of original working drawings.

Incidentally, to correct an error, the machine shown on page 56 of the 1904 book on Edisonia, St. Louis Exposition, is not a "Z" dynamo (all of which were built at Goerck Street, N.Y. City), but one of the machines built at Wards Park. See page 154 for illustration of the "Z" machine.

Very truly yours,

Chas. L. Clarke

in 1880.
